Evaporating oil

Product description

Evaporating oil is a substance that evaporates 100% and is dedicated for flat glass cutting.

Evaporating cutting oils secure good productivity and sustainable quality for glass cutting.

It does not leave any remnants on the glass surface, which prevents both contamination of the water used for washing the glass as well as losing the adhesive properties of the glass surfaces subjected to cutting.

It is designated in particular for such glass cutting where the time between the glass breaking and a further production process is relatively short.

Package

Delivered in:
20-litre canisters,
200-litre drums,
1000-litre tanks.
